

# Box for Salesforce Government Cloud

Boost mission success with secure collaboration and document management

Box for Salesforce Government Cloud centralizes critical case management, reducing friction for your teams by empowering them to securely access and edit files, sign documents, and collaborate with internal colleagues, external partners, and constituents. Best of all? You can apply your native security, compliance, and governance to all content stored in Box.

## Streamline work with a secure single source of truth

Internal teams and external partners can review, update, and add files — all without leaving Salesforce.

## Unlimited storage on Salesforce

Eliminate the need to worry about storage limitations and paying for storage on Salesforce.

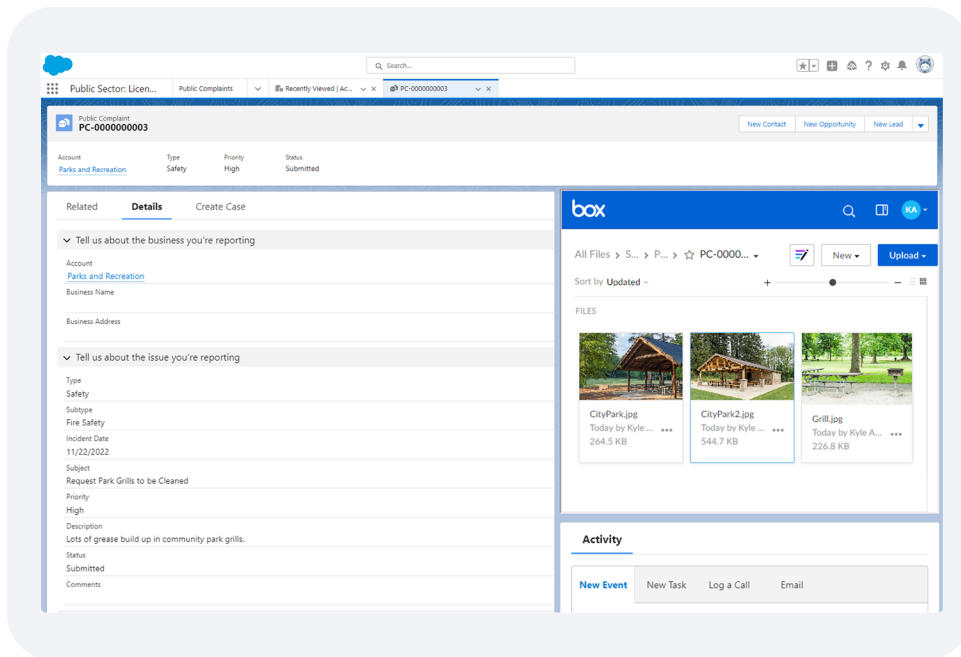

## Work on-the-go securely from any device

Enable your field staff to work faster, stay in sync, and access the files they need with secure mobile access.

## The Power of Box for Salesforce Government Cloud

Governments and their contractors face unique challenges: managing multiple legacy systems, rising customer expectations, increasing cyber security threats, and adhering to ever-changing rules and regulations. All of which makes compliant and trustworthy processes and tools for document management and collaboration mission critical.

Box has a proven track record for empowering organizations that work in highly regulated sectors. Salesforce's built-in enterprise grade security enables Box for Salesforce users to collaborate, protect private information, and create onboarding and training experiences for their employees and partners — all while ensuring content security, compliance, and governance.

*"We explored (and invested in) several on-premises and cloud content management systems, and the integration with Box was by far the most efficient, cost-effective and frictionless solution we found."*

Mohammed Al Rawi, CIO, Los Angeles County Public Defender's Office

## Compliant Content Services for Governmental Agencies

Get everything your agency needs to deploy secure, zero-trust cloud storage for Government with our streamlined, integrated collaboration tier for data and governance, along with FedRAMP, StateRAMP, CJIS, HIPAA, IRS-1075, and other highly regulated data sets.\*

StateRAMP

\* Content is compliant when at rest within Box.

## Additional Features & Components

Leverage Box's 1500+ integrations, including Slack, Quip, and Salesforce to securely manage and streamline your entire content lifecycle from directly within your workflows.

### Box Sign

With Box Sign, you can stop paying for e-signatures by the document or user and give every Box user the ability to configure and securely send documents for e-signature from anywhere in Salesforce, including Slack.

### 

With Box, Slack, and Salesforce Government Cloud, you can securely manage your entire content lifecycle, from creation to collaboration to e-signature.

### 

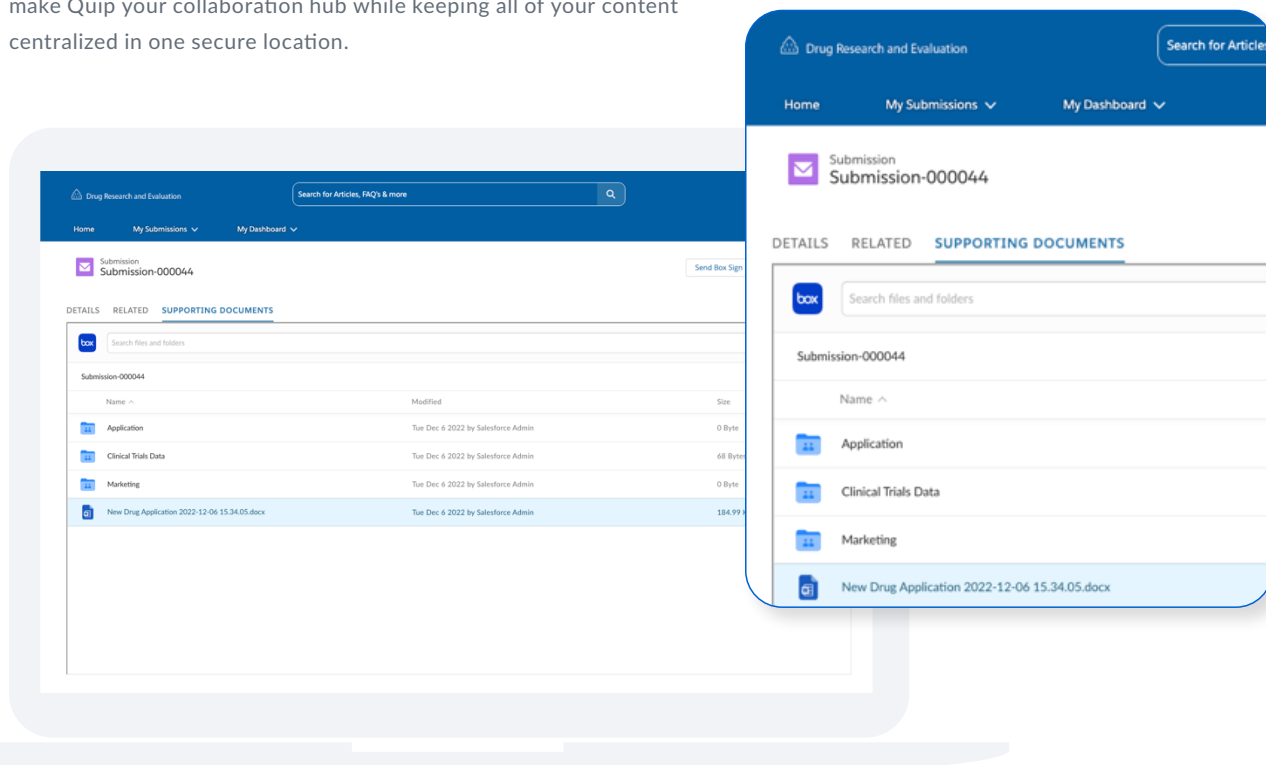

Spend less time toggling between tabs and more time completing projects. With the Box Files Viewer Live App for Quip, you can make Quip your collaboration hub while keeping all of your content centralized in one secure location.

### Box for Salesforce Developer Toolkit

Our Developer Toolkit enables you to further customize Box for Salesforce Government Cloud. Access Apex SDK calls designed for common use cases, such as automatic sub-folder creation in record-associated Box folders.

### Box SDK for Salesforce

Leverage Box Content Cloud API's to deliver content at the right time and in the right context. Use our Apex SDK to integrate the Box Platform with other Salesforce Clouds including Customer and Partner Experience Cloud, as well as your custom Apps.
